The following instructions will show guests how to connect to the wireless access points at the Northern Virginia Center. These instructions will work on any wireless device (Laptop, Macbook, iPhone/iPad, Android devices, etc).

1. Once you have received confirmation that your guest wireless account has been activated, open the wireless settings on your device and select “CONNECTtoVT-Wireless”.

2. Next open a web browser.
3. When you open a web browser you should be taken to the login screen for wireless access as shown above. If this page doesn’t load, try surfing to another website and you should be redirected to the login screen shown above.

4. In the “Guest / Temporary Login” area of the login page, in the text box labeled “Guest Email or VT PID” enter the email address you used on the guest wireless request form. In the box labeled “Network Password”, enter the password given to you for wireless access.

5. Once all of the information has been entered click on the “Guest Connect” button and you will be logged into the wireless network.

**Note:** If your wireless connection remains idle for a period of 30 minutes to and hour you will be disconnected from the wireless access points. When this occurs, follow the steps in this guide again.
