

Graduate Program Engineering & Technology Management

**Masters Degree in
Engineering Administration**

**Graduate Certificate in
Technology Management**

**Graduate Certificate in
Human-System Integration**

Graduate studies in Engineering Administration and Technology Management provide practicing engineers, scientists and other technical professionals with a graduate level academic experience that further prepares them for career advancement — in the role of managing and providing administrative support for the technology-based operations of any progressive enterprise. This experience includes the analysis and solution of enterprise, process, program and project management problems using scientific and mathematical methods. A variety of practical graduate level subjects in engineering administration, technology management, human-system integration, industrial and systems engineering, business, operations management and economic development are available to qualified candidates from diverse backgrounds. Graduates of this certificate/degree program typically serve in advanced positions as project manager, program administrator, laboratory director, engineering manager, technology executive, etc.

This is an ISE Extended Campus Program with all degree and certificate courses available to working professionals throughout the Commonwealth of Virginia.
